SECTION A

ECONOMIC INDICATORS AND TRENDS

1. CROP ESTIMATES AND FORECASTS

Areas planted and ninth production forecast for summer crops for the 2025 production season

According to the ninth production forecast for summer crops by the Crop Estimates Committee (CEC) for the 2025 production season, the expected South African maize crop was 16,325 million tons, which was 27,0% more than the 12,850 million tons of the 2024 season and 6,9% or 1,052 million tons more than the five-year average of 15,273 million tons up to 2024.

The estimated area that South African commercial producers planted to maize during the 2025 season was 2,597 million ha. This was 1,5% or 39 550 ha less than the 2,636 million ha planted in the previous season. Of this area, 1,195 million ha (46,0%) were in the Free State, 540 000 ha (20,8%) in North West and 524 000 ha (20,2%) in Mpumalanga.

The plantings of maize decreased by 4,4%, from 1,250 million ha to 1,195 million ha in the Free State. However, the plantings of maize increased by 1,9%, from 530 000 ha to 540 000 ha, in North West and by 0,8%, from 520 000 ha to 524 000 ha, in Mpumalanga for the 2025 season.

The ratio of white to yellow maize plantings was estimated at 62:38. The estimated white maize plantings were 1,600 million ha, which is an increase of 2,9% from the previous season's plantings of 1,555 million ha. Yellow maize plantings were estimated to be 997 000 ha—7,8% less than the 1,081 million ha for 2024.

Most of the country's maize crop was produced in the Free State (41,0%), Mpumalanga (24,7%) and North West (16,2%).

The production forecast for white maize was 8,336 million tons, which was 37,7% or 2,281 million tons more than the 6,055 million tons of 2024 and 424 250 tons more than the average of the five years up to 2024. The expected yield for white maize was 5,21 t/ha, as against 3,89 t/ha in the previous season.

In the case of yellow maize, the production forecast was 7,989 million tons, which was 17,6% or 1,194 million tons more than the 6,795 million tons of the previous season and 627 300 tons more than the five-year average up to 2024. The yield for yellow maize was expected to be 8,01 t/ha, as against 6,28 t/ha in 2024.

The expected sunflower seed crop was 708 300 tons, which was 12,1% more than the 632 000 tons of the previous season and 3,3% less than the average of 732 810 tons for the five years up to 2024. The area planted to sunflower seed was estimated at 555 700 ha, which is 5,0% higher than the 529 000 ha planted for 2024. The expected yield was 1,27 t/ha, as against 1,19 t/ha the previous season.

The production forecast for soya beans was 2,753 million tons, which was 49,0% more than the 1,848 million tons of the previous season. The estimated area planted to soya beans was 1,151 million ha, which is 500 ha more than the 1,150 million ha planted for 2024. The expected yield was 2,39 t/ha, as against 1,61 t/ha in 2024.

The expected groundnut crop was 61 389 tons, which was 18,1% or 9 389 tons more than the 52 000 tons of the 2024 season and 7 813 tons more than the five-year average of 53 576 tons per annum up to 2024. The area planted to groundnuts was estimated at 48 125 ha, which is 16,8% or 6 925 ha more than the 41 200 ha planted the previous season. The expected yield was 1,28 t/ha, as against 1,26 t/ha in 2024.

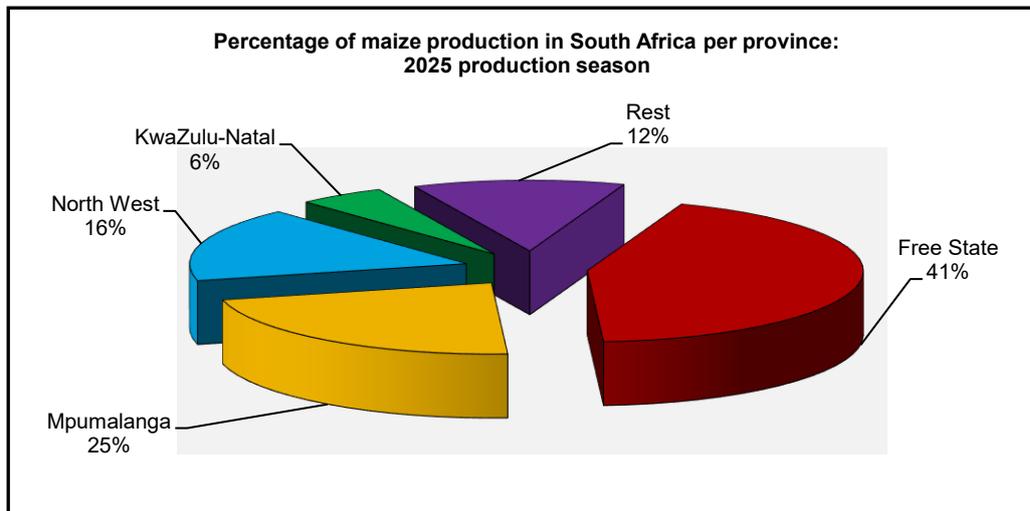

The production forecast for sorghum was 144 665 tons—47,6% more than the 98 000 tons of the previous season. The area planted to sorghum was estimated to be 41 150 ha, which is 2,3% or 950 ha less than the 42 100 ha planted for 2024. The expected yield was 3,52 t/ha, as against 2,33 t/ha the previous season.

The production of dry beans was expected to be 90 556 tons, which was 79,3% or 40 061 tons more than the 50 495 tons of the previous season and 35 393 tons more than the five-year average of 55 163 tons per annum up to 2024. The estimated area planted was 45 620 ha, or 15,4% more than the 39 550 ha planted the previous season. The expected yield was 1,99 t/ha, as against 1,28 t/ha for 2024.

Area planted and ninth production forecast of summer field crops: 2025 production season*

Crop	Area planted 2025	Ninth forecast 2025	Area planted 2024	Final crop 2024	Change – tons 2025 vs 2024
	ha	Tons	ha	tons	%
White maize	1 599 700	8 335 750	1 554 750	6 055 000	+37,7
Yellow maize	997 000	7 988 800	1 081 500	6 795 000	+17,6
Total maize	2 596 700	16 324 550	2 636 250	12 850 000	+27,0
Sunflower seed	555 700	708 300	529 000	632 000	+12,1
Soya beans	1 151 000	2 753 125	1 150 500	1 848 000	+49,0
Groundnuts	48 125	61 389	41 200	52 000	+18,1
Sorghum	41 150	144 665	42 100	98 000	+47,6
Dry beans	45 620	90 556	39 550	50 495	+79,3

* Estimates exclude the non-commercial sector.

Intended plantings of summer grain crops for the 2026 production season

Figures on the intended plantings of summer crops for the 2026 production season were released by the Crop Estimates Committee (CEC) on 28 October 2025. Based on inputs received from a sample of producers, the area expected to be planted to maize on commercial farms was 2,666 million ha, of which 1,615 million ha (61%) were earmarked for white maize and 1,051 million ha (39%) for yellow maize. The commercial producers intended to increase the area planted to white maize by 15 000 ha (0,9%) and yellow maize plantings by 54 000 ha (5,4%) from the previous season.

In the case of sunflower seed, intended plantings were estimated at 531 100 ha, which is 4,4% or 24 600 ha less than the 555 700 ha planted the previous season.

The intended plantings of soya beans showed an increase of 2,5% from the area planted the previous season, from 1,151 million ha to 1,179 million ha.

The intended plantings of groundnuts were 12,2% lower than the area planted the previous season, from 48 125 ha to 42 240 ha.

The plantings of sorghum were expected to decrease by 4,6%, from 41 150 ha to 39 250 ha.

The intended plantings of dry beans also showed a decrease of 20,2%, from the area planted the previous season, from 45 620 ha to 36 420 ha.

Summary of intended plantings of summer grain crops: 2026 production season

Crop	Intended plantings 2026	Area planted 2025	Change 2026 vs 2025
	ha	ha	%
White maize	1 614 700	1 599 700	+0,9
Yellow maize	1 051 000	997 000	+5,4
Total maize	2 665 700	2 596 700	+2,7
Sunflower seed	531 100	555 700	-4,4
Soya beans	1 179 200	1 151 000	+2,5
Groundnuts	42 240	48 125	-12,2
Sorghum	39 250	41 150	-4,6
Dry beans	36 420	45 620	-20,2
Total	4 493 910	4 438 295	+1,2

Estimates are based on conditions by the middle of October 2025

Approximately 87% of the total area planted to summer grain crops in South Africa during the past three years was located in the Free State (46%), North West (21%) and Mpumalanga (20%).

Third production forecast for winter crops for the 2025 production season

According to the third production forecast for 2025 released by the CEC on 28 October 2025, the expected wheat crop was 2,034 million tons, which is 5,4% or 104 380 tons more than the 1,930 million tons of the previous season. The expected yield was 3,93 t/ha, as against 3,82 t/ha in the previous season.

The main wheat producing areas for 2025 are within Western Cape with 363 000 ha (70,2%), followed by the Free State with 57 000 ha (11,0%). The expected yield for Western Cape was 2,90 t/ha, same as the previous season and 5,30 t/ha for Free State, compared to 4,60 t/ha.

The production forecast for barley was 346 430 tons. The area planted was estimated at 96 950 ha, while the expected yield was 3,57 t/ha.

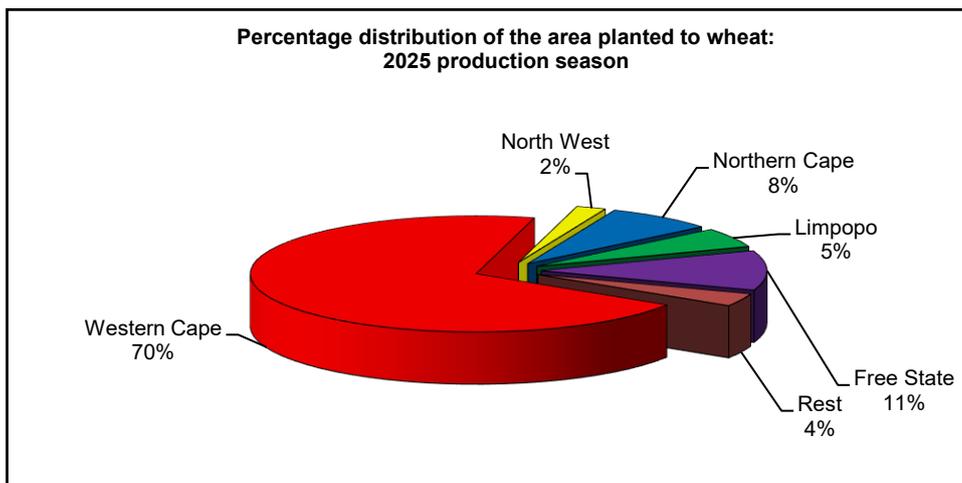

The expected canola crop was 311 890 tons, while the area estimate was 174 515 ha, with an expected yield of 1,79 t/ha. This is the largest canola crop produced in the history of South Africa.

The expected oats crop was 57 213 tons. The area planted was estimated at 35 520 ha, while the expected yield was 1,61 t/ha.

The expected sweet lupines crop was 21 000 tons, while the area estimate was 21 000 ha. The expected yield was 1,00 t/ha.

Area and production estimates for winter cereals: 2025 vs the 2024 production season

Crop	Area planted	Third forecast	Area planted	Final crop	Change – tons
	2025	2025	2024	2024	2025 vs 2024
	(A)	(B)	(C)	(D)	(B)÷(D)
	ha	tons	ha	tons	%
Wheat	517 300	2 034 380	505 300	1 930 000	+5,4
Barley	96 950	346 430	100 700	372 250	-6,9
Canola	174 515	311 890	165 750	290 400	+7,4
Oats	35 520	57 213	31 000	43 400	+31,8
Sweet lupines	21 000	21 000	16 000	19 200	+9,4

2. ECONOMIC INDICATORS OF THE SOUTH AFRICAN AGRICULTURAL SECTOR

Indicator (at current prices)	Oct. '23 to Sep. '24	Oct. '24 to Sep. '25	% Change
Total gross farming income (R million)	454 045	491 341	+8,2
Expenditure on intermediate goods and services (R million)	247 185	244 117	-1,2
Total farming cost (R million)	334 009	334 564	+0,2
Net farming income (R million)	128 298	165 427	+28,9
Domestic terms of trade (2015 = 1)	1,24	1,28	+3,0

Gross income from major products at current prices

Field crops (R million)	Oct. '23 to Sep. '24	Oct. '24 to Sep. '25	% Change
Maize	55 180	74 450	+34,9
Wheat	11 155	10 209	-8,5
Sugar cane	16 287	14 264	-12,4
Sunflower seed	5 571	1 826	-67,2
Cotton	447	336	-24,9
All field crops	115 555	133 111	+15,2
Horticulture (R million)			
Vegetables (including potatoes)	39 698	40 798	+2,8
Deciduous and other fruit	36 613	38 354	+4,8
Citrus fruit	35 241	42 387	+20,3
Viticulture	7 858	7 455	-5,1
Subtropical fruit	9 414	8 255	-12,3
All horticultural products	143 248	153 297	+7,0
Animal products (R million)			
Poultry meat	70 495	73 251	+3,9
Cattle and calves slaughtered	45 693	49 715	+8,8
Milk	28 474	27 470	-3,5
Eggs	16 301	16 418	+0,7
Sheep slaughtered	8 467	9 376	+10,8
All animal products	195 242	204 933	+5,0

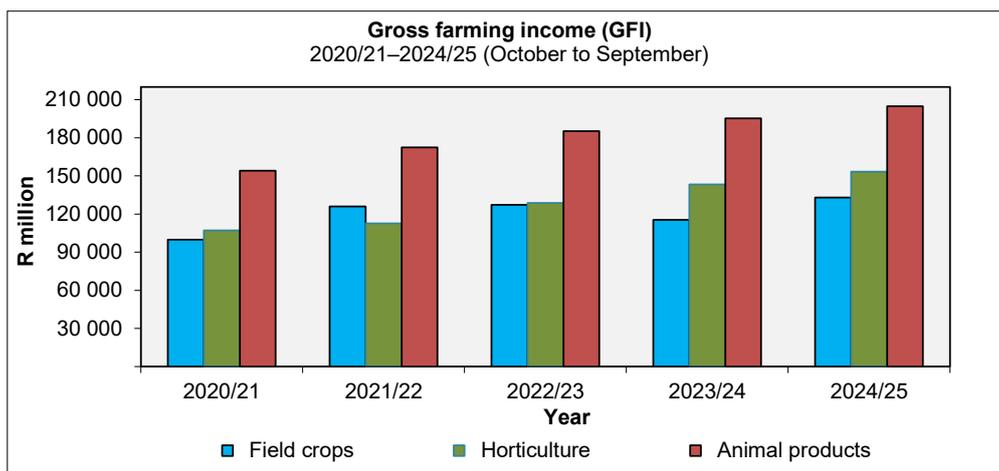

3. ECONOMIC OVERVIEW

This article provides an overview of the major macroeconomic trends in the agricultural sector for the period 1 October 2024 to 30 September 2025. The aggregates are compared with those of the period 1 October 2023 to 30 September 2024.

Gross farming income

Gross farming income refers to that part of agricultural production that is marketed, together with the part that is for own consumption, both valued at basic prices.

The gross farming income generated from all agricultural products increased by 8,2% to R491,340 million for the period ended 30 September 2025, compared with R454,045 million in the previous period. The increase in gross farming income is mainly attributed to higher income from field crops (15,2%), horticultural products (7,0%) and animal products (5,0%).

Income from field crops increased by 15,2%, largely due to higher income from maize by 34,9% (R19 270 million), dry beans by 32,7% (R497 million), soya beans by 24,2% (R3,316 million), canola by 23,6% (R475 million), groundnuts by 16,6% (R77 million), hay by 6,0% (R253 million) and tobacco by 5,1% (R25 million). Income from sunflower seed decreased significantly by 67,2%, cotton (24,9%), sugar cane (12,4%) and wheat (8,5%).

Income from horticultural products increased by R10 049 million (7,0%) to R153 297 million in 2024/2025, compared with R143 248 million in the previous period. The increase was mainly driven by higher earnings from citrus fruit (20,3%), deciduous and other fruit (4,8%) and vegetables (2,8%). In contrast, income derived from subtropical fruit and viticulture decreased by 12,3% and 5,1%, respectively.

Income from animal products increased by 5,0%, driven by higher income from sheep (10,8%), cattle and calves slaughtered (8,8%), poultry meat (3,9%), and eggs (0,7%). In contrast, income from milk decreased by 3,5%.

Expenditure on intermediate production inputs

Expenditure on intermediate production inputs refers to the value of goods and services that were purchased to be consumed as inputs during the production process.

Expenditure on intermediate goods and services decreased by 1,3% and was estimated at R244 070 million for the period under review. This decline was driven by increases in expenditure on building and fencing materials (7,2%), farm services (4,3%), maintenance and repairs of machinery and implements (3,3%), fuel (1,8%) and fertilisers (0,7%). The expenditure on farm feeds decreased by 7,2%, packing material (4,1%), and seed and plants and animal health and crop protection (3,9%) each.

Proportionally, farm feeds remained the largest expenditure item, accounting for approximately 26,4% of the total expenditure on production inputs. This was followed by fertilisers (14,8%), farm services (11,1%), maintenance and repairs of machinery and implements (9,7%), fuel (9,0%), seeds and plants (6,4%), packing material (5,1%), building and fencing materials (4,9%), and animal health and crop protection (4,1%).

Prices received and paid by farmers

The average price received by farmers for all agricultural products increased by 3,7%.

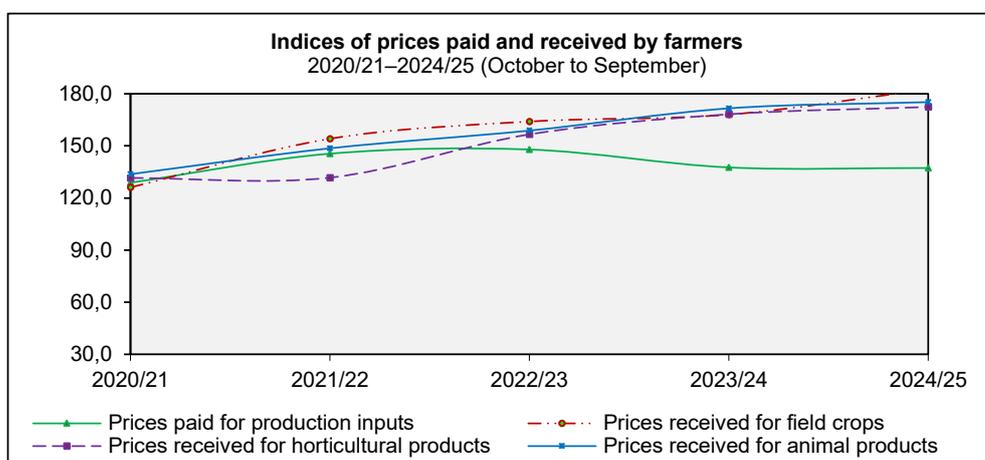

This increase was mainly driven by higher average prices for field crops (8,6%), which was driven by increases in prices of dry beans (23,0%), hay (16,7%), summer grains (15,9%), tobacco (6,8%), and winter grains and sugar cane (2,4% each). However, prices for oilseeds and cotton decreased by 5,9% and 0,6%, respectively.

The average price of horticultural products increased by 2,5%, largely due to higher prices for viticulture (10,1%) and fruit (7,4%). However, average price for vegetables decreased by 5,6%.

The average price of animal products increased by 2,1%, mainly because of higher prices received for slaughtered stock (12,7%). On the other hand, average prices for pastoral products decreased by 7,1%, milk (5,8%) and poultry (2,6%).

The prices paid for farming requisites, including machinery and implements, intermediate goods and services, and materials for fixed improvements, decreased slightly by 0,2%. This decline was mainly driven by lower prices paid for animal health and crop protection (8,5%) and fuel (6,8%).

The domestic terms of trade increased by 3,0%, from 1,24 to 1,28, attributed to higher prices received by farmers for agricultural products as opposed to the decrease in prices paid for certain agricultural inputs.

Farming income and cash flow

Gross farming income increased by 8,2%, while expenditure on agricultural production inputs decreased by 1,2%, resulting in a rise in net farming income. Within production costs, interest payments increased by 11,5%, labour costs by 3,0%, and rent payments by 2,5%.

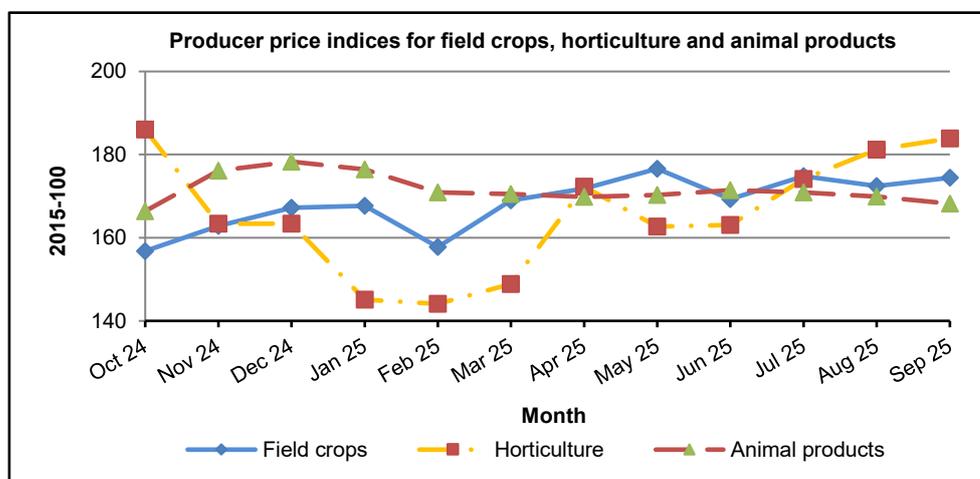

Farmers' cash flow increased by 29,5%, primarily due to the higher gross income and the reduction in spending on production inputs.

Conclusion

The increase in gross farming income resulted from higher income earned across all agricultural products, mainly field crops (15,2%), horticultural products (7,0%) and animal products (5,0%), attributed to higher production volumes and improved prices for key agricultural commodities.

4. INDICES OF PRODUCER PRICES OF AGRICULTURAL PRODUCTS

Product	Weight	July		August		September	
		2024	2025	2024	2025	2024	2025
		Index (2015 = 100)					
Field crops	22,5	174,6	173,8	173,4	167,4	173,8	156,6

SECTION B

FRESH PRODUCE MARKETS OVERVIEW

FRESH MARKET STATISTICS OF SEASONAL FLUCTUATIONS IN QUANTITIES AND PRICES OF FRUIT AND VEGETABLES SOLD ON THE MAJOR FRESH PRODUCE MARKETS

The purpose of this overview is to show the short-term price and volume trends (seasonal fluctuations) of various types of fruit and vegetables sold on major fresh produce markets and to make comparisons between the markets.

Market prices are determined by the interaction between supply and demand, which is influenced by various factors. Supply factors include climate, seasonal production, perishability of products and producers' reaction to prices realised in preceding periods, etc. Demand factors include consumer preferences, substitution between products and per capita income. Therefore, the seasonal pattern of quantities sold, and prices realised, may differ considerably among the various markets.

Detailed information regarding fruit and vegetables sold on the markets is available on request from the Directorate: Statistics and Economic Analysis.

Tel no.: 012 319 8453

Fax: 012 319 8031

Mass, value and average price of vegetables sold on the 17 major fresh produce markets:
