1. CROP ESTIMATES AND FORECASTS

Area planted and first production forecast for summer crops for the 2026 production season

According to the first production forecast for summer crops by the Crop Estimates Committee (CEC) for the 2026 production season, the expected South African maize crop was 16,126 million tons, which was 3,2% less than the 16,650 million tons of the 2025 season and 3,8% or 583 350 tons more than the five-year average of 15,543 million tons up to 2025.

The estimated area that South African commercial producers planted to maize during the 2026 season was 2,716 million ha. This was 4,6% or 119 500 ha more than the 2,597 million ha planted in the previous season. Of this area, 1,210 million ha (44,5%) were in Free State, 600 000 ha (22,1%) in North West and 540 000 ha (19,9%) in Mpumalanga.

The plantings of maize in Free State increased by an estimated 1,3%, from 1,195 million ha in 2025 to 1,210 million ha in 2026 and in North West by 11,1%, from 540 000 ha to 600 000 ha. Plantings in Mpumalanga increased by an estimated 3,1%, from 524 000 ha in 2025 to 540 000 ha in 2026.

The ratio of white to yellow maize plantings was estimated at 61:39. The estimated white maize plantings were 1,645 million ha, which is an increase of 2,8% from the previous season's plantings of 1,600 million ha. Yellow maize plantings were estimated to be 1,072 million ha—7,5% more than the 997 000 ha for 2025.

3. ECONOMIC OVERVIEW

This article provides an overview of the major macroeconomic trends in the agricultural sector for the period 1 January to 31 December 2025. The aggregates are compared to those of the period 1 January to 31 December 2024.

Gross farming income

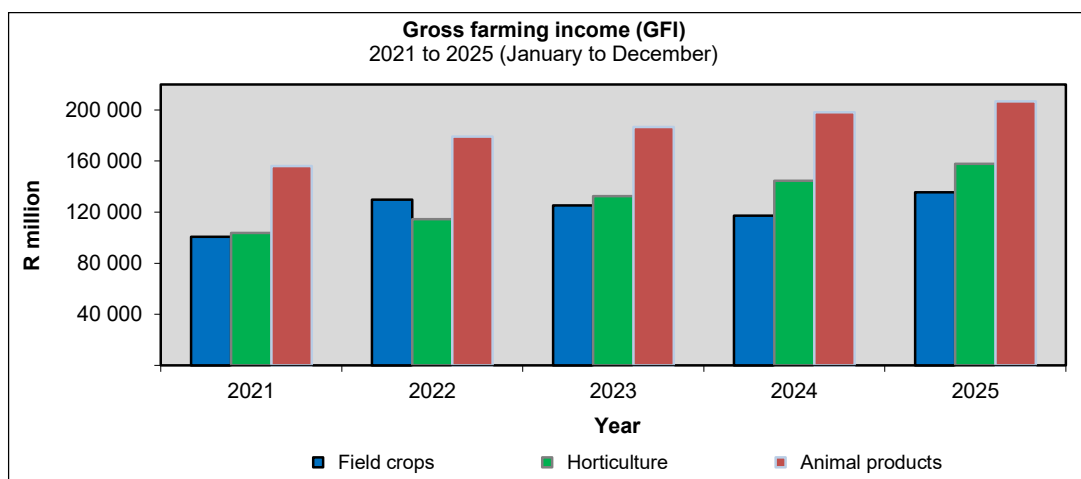

Gross farming income refers to both the part of agricultural production that is marketed and production for own consumption, valued at basic prices.

Total gross farming income earned from agricultural production increased by 8,7% to R500 248 million in 2025, largely because of the increase in income from field crops by 15,6%, horticultural products by 9,1% and animal products by 4,4%.

Income from field crops was mainly driven by the increase in income from grain sorghum by 58,1%, dry beans (53,7%), maize (30,2%), soya beans (28,2%), groundnuts (18,1%), canola (15,5%) and sunflower seed (10,2%).

The 9,1% increase in income from horticultural products was mainly driven by higher income from citrus fruit (22,9%), deciduous and other fruit (8,3%), vegetables (3,9%) and viticulture (1,4%).

The 4,4% increase in income from animal products was mainly driven by higher income from sheep slaughtered (9,1%), eggs (7,1%), cattle and calves slaughtered (5,3%), pigs slaughtered (5,3%) and poultry meat (3,2%). Income earned from milk decreased by 5,6%.

Expenditure on intermediate production inputs

Expenditure on intermediate production inputs refers to the value of the goods and services that were purchased to be consumed as inputs during the production process.

The expenditure on intermediate goods and services increased by 3,4% to R270 806 million in 2025, as compared to R261 855 million in 2024. This was mainly driven by the increase in expenditure on packing material by 20,8%, building and fencing material by 10,0%, farm services by 6,0%, maintenance and repairs of machinery and implements by 3,6%, fuel by 2,7% and fertilisers by 2,1%.

Farm feeds remained the main expenditure item, accounting 23,9% of the total expenditure, followed by fertilisers (14,8%), farm services (10,2%), maintenance and repairs of machinery and implements (9,6%), fuel (8,2%), packing material (7,9%), animal health and crop protection (6,5%), seed and plants (5,8%) and building and fencing material (4,6%).

Prices received and paid by farmers as well as terms of trade

Prices received by farmers for agricultural products increased by 2,4%, driven by the increases in the average prices of animal products (5,1%) and horticultural products (0,3%).

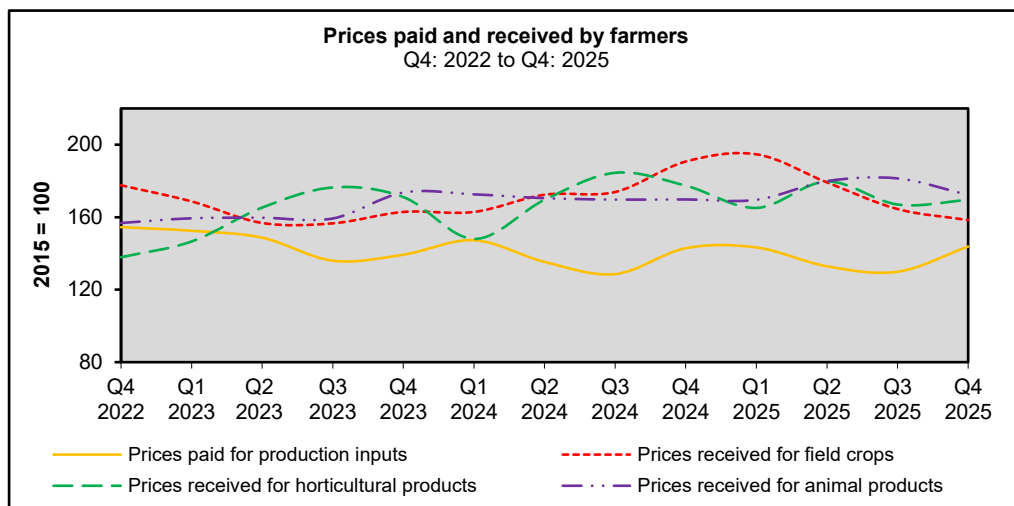

The average price of field crops decreased slightly by 0,4%, mainly due to lower prices of summer grains (3,5%), oilseeds (2,8%) and sugar cane (1,7%). In contrast, the prices of dry beans increased by 32,9%, tobacco (16,5%), hay (16,1%), winter grains (3,2%) and cotton (0,1%).

A slight increase of 0,3% in the average price of horticultural products was driven by improved prices of viticulture (10,3%) and fruit (2,9%). However, the prices of vegetables decreased by 5,6%.

The average price of animal products increased by 5,1% and was driven by the increase in the price of slaughtered stock. Prices of milk decreased by 5,3%, pastoral products (5,0%) and poultry (2,1%).

The prices paid for farming requisites, including machinery and implements, material for fixed improvements, as well as intermediate goods, decreased marginally by 0,7%, as opposed to a decrease of 3,9% the previous period. This was mainly due to the decrease in prices of animal health and crop protection by 12,5%, fuel (3,6%) and seeds (0,1%). Prices of maintenance and repairs of machinery and implements increased by 7,1%, packaging material (5,2%), fencing material (4,5%), fertilisers (4,2%), building material (2,4%), feeds (2,2%), trucks (1,2%) and tractors (0,6%).

The terms of trade showed an increase of 2,4%, from 1,24 in 2024 to 1,27 in 2025, due to improved prices received from the agricultural production, as opposed to a marginal decrease of 0,7% in production inputs costs.

Net farming income and cash flow

Gross farming income increased by 8,7% to R500 248 million, while expenditure on intermediate goods and services increased by 3,4% to R270 806 million. As a result, net farming income increased drastically by 24,8% to R137 927 million in 2025. The interest payment increased by 10,4%, labour remuneration (3,2%) and rent payment (2,7%).

The farmers' cash flow increased by 23,8% and was estimated at R141 282 million in 2025, compared to R114 150 million in 2024. This improvement was mainly driven by higher gross farming income and improved commodity prices.

Conclusion

The increase in gross farming income can be attributed to higher production levels of major grains and horticultural products, as well as improved prices of certain agricultural products, particularly dry beans (32,9%), slaughtered stock (20,1%), tobacco (16,5%), hay (16,1%), viticulture (10,3%), winter grains (3,2%) and fruit (2,9%).

On the other hand, a 6,8% decrease in the number of livestock slaughtered and lower prices of vegetables, milk, pastoral products, oilseeds and poultry negatively impacted gross farming income.

SECTION B

FRESH PRODUCE MARKETS OVERVIEW

FRESH MARKET STATISTICS OF SEASONAL FLUCTUATIONS IN QUANTITIES AND PRICES OF FRUIT AND VEGETABLES SOLD ON THE MAJOR FRESH PRODUCE MARKETS

The purpose of this overview is to show the short-term price and volume trends (seasonal fluctuations) of various types of fruit and vegetables sold on major fresh produce markets and to make comparisons between the markets.

Market prices are determined by the interaction between supply and demand, which is influenced by various factors. Supply factors include climate, seasonal production, perishability of products and producers' reactions to prices realised in preceding periods, etc. Demand factors include consumer preferences, substitution between products and per capita income. Therefore, the seasonal pattern of quantities sold, and prices realised, may differ considerably among the various markets.

Detailed information regarding fruit and vegetables sold on the markets is available on request from Directorate: Statistics and Economic Analysis.
